## POOKIE BUSTER PBF01-2PK

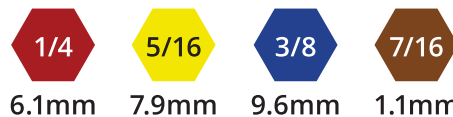

Patented Broach Cut Magnetic Hex Nut Driver

The Pookie Buster is a magnetic hex nut driver with a patented broach cut end that eliminates the unnecessary extra work needed to remove mastic, caulking, tape, or any other type of "Pookie" that is covering the hex head of a screw. The bits are meant to be used as a standard magnetic nut driver but when faced with several screws coated in "Pookie", the specialty designed broach makes easy work of removing the material so time is not wasted.

- ✓ **Versatile and Durable** | This set includes two bits in four common sizes (1/4", 5/16", 3/8", and 7/16") to meet every job's needs.
- ✓ **Patented Broach Design** | The broach cut end makes locating and removing fasteners covered in sealants a breeze. [Patent No. US8984991B1](#)
- ✓ **Quick and Efficient** | Easily cuts through soft and hardened mastics, caulking, and other materials.
- ✓ **Built to Last** | Made with high-quality materials to ensure long-lasting performance and reliability.

### FOUR INTERCHANGABLE SIZES:

6.1mm 7.9mm 9.6mm 1.1mm
